COUNTY APPOINTS NEW CHIEF TECHNOLOGY OFFICER
Executive with SAIC Selected to Oversee County Computer, Telephone Contract

Michael L. Moore, a corporate vice president with San Diego-based Science Applications International Corp., has been hired by the County of San Diego as its new chief technology officer.

Moore will join the County on Nov. 8. In his new job, he will oversee and monitor the County's information technology outsourcing contract with the Pennant Alliance, a consortium of companies led by Computer Sciences Corp. SAIC is also a member of the Pennant Alliance.

The County is in the third year of a 7-year contract with CSC and the Pennant Alliance. Under that contract, the Alliance installs, operates and maintains all computers, telephones and related equipment. In his former position with SAIC, Moore played a significant role in implementing the outsourcing agreement, and upgrading the County's computer and telephone network.

"We are thrilled to have Mike on board. He knows this contract, and he knows how to make it a success. He has a proven track record and brings the County the leadership to keep us moving forward," said County Chief Administrative Officer Walt Ekard.

Moore has worked in the private sector technology field since 1989, when he retired from a 20-year Naval career. He holds a bachelor's degree in business administration from National University. Moore replaces former County Chief Technology Officer Denny Piper, who resigned Oct. 22.
